

Returning to

Driving

IN THIS BOOKLET:

- How a brain injury affects driving
- Driving for a living
- When can I start driving?
- Driving assessments
- Seizures and epilepsy
- Driving licence and insurance
- Tax relief and parking
- Help and information

Brain Injury Series

This booklet was written for, and with, people with an Acquired Brain Injury. An Acquired Brain Injury is an injury to someone's brain that happens during their lifetime. It can be caused by a stroke, an infection, lack of oxygen, surgery or a head injury, for example.

Note: throughout this booklet, we use the phrase 'brain injury' to refer to an Acquired Brain Injury.

Headway's Information and Support Team would be happy to hear your feedback on this booklet. Please contact us on 1800 400 478 or email info@headway.ie.

Visit www.headway.ie/information:

- To read or download copies of other booklets in this Brain Injury Series.
- To print the booklets and other resources, including Large Print versions.
- To request hard copies of the booklets.
- To see the booklet contributors and the sources we used.

Please note: we have done our best to provide information that is correct and up-to-date. However, we cannot be responsible for any errors or omissions. Everyone's brain injury affects them differently. You should not consider the information in this booklet as a substitute for getting advice from a doctor or other professional.

Key points on returning to driving

Where to get more help and information

Useful tips

Tools to try yourself

People with brain injuries share
their experiences

Introduction

For many people, one of the first things they focus on after their initial recovery from their brain injury, is when they can get back to driving. However, as we know, driving uses many complex thinking and physical skills which may have been affected by a brain injury.

You may be safe to drive now or sometime in the future. This will depend on how your brain injury has affected you. Some people will need to have their cars adapted or change to driving an automatic. Other people may have to accept that they are no longer able to drive safely.

In this booklet, we provide you with the current facts regarding returning to driving, along with tips and advice based on research and people's own experiences. We hope you will find this booklet useful — whatever your situation.

At the time of publication, the current guidelines for drivers with illnesses or disabilities are the Medical Fitness to Drive Guidelines, October 2018. These guidelines are updated every year. You will find the latest version on www.rsa.ie. It is your responsibility to check that you have met all current requirements before you return to driving. Speak to your GP for guidance.

Brain injury and driving

A brain injury can affect your ability to drive in many different ways. Some of the effects are obvious because they are physical, while other effects can be invisible or hidden.

When we drive, we use many different mental and physical abilities - for example: being aware of our surroundings, ignoring distractions, as well as using the car controls such as the pedals, gears and steering wheel. Many different effects following a brain injury can impact on a person's ability to drive.

Physical effects include:

- Seizures or epilepsy.
- Weakness in the arms or legs, or paralysis.
- Tiredness (fatigue).
- Difficulties with balance, movement or coordination.
- Changes in your sight or hearing.

Hidden effects include:

- Slowed thinking speed and reaction times.
- Memory - for example: remembering where you are going and how to get there.
- Being more impulsive or prone to anger outbursts.
- Loss of ability to read signs or maps.
- Reduced ability to concentrate, to anticipate danger, to plan ahead or to be aware of your own limitations.

When can I return to driving?

This depends on how severe your injury was and what after-effects you still have. Before returning to drive, you need to allow yourself plenty of time to recover and to adjust to any changes from your brain injury.

If any after-effects you have are likely to impact on your ability to drive safely, you must get yourself checked as safe to drive by a registered medical professional. This can be your consultant or your GP. They will base their decision on their medical judgement and the current **Medical Fitness to Drive Guidelines**. You can check what the medical guidelines are for your condition at www.rsa.ie.

If you are able to return to driving, it will usually be a number of months after your brain injury. Your doctor may ask you to get an assessment done to help them to make their decision if you are ready to return to driving. You can also apply to get a driving assessment done yourself by contacting your nearest assessment provider. See page 8 for more on this.

See **Help and information** on page 22 for contact details of providers of driving assessments and the National Driving Licence Service (NDLS). See also 'Is my licence still valid?' on page 9.

Driving for a living

This booklet is mainly for anyone driving their own car. If you drive a truck or a bus, you need to make sure you comply with the **Medical Fitness to Drive Guidelines** for truck and bus drivers (called Group 2 drivers). The Group 2 guidelines are stricter than for driving a private car - see 'Medical Issues' on www.rsa.ie. Talk to your employer and your doctor about this.

If you are not able to meet the requirements for returning to work as a truck or bus driver, this does not automatically mean you cannot drive your own car. Discuss this with your GP.

If you cannot drive for work any longer, in most cases, your employer is obliged to take reasonable steps to give you different duties. This known as 'reasonable accommodation'. Talk to your employer about this or contact Citizens Information for advice t: 076 107 4000 or visit www.citizensinformation.ie.

Taxi drivers and cab drivers

If you hold a Small Public Service Vehicle licence (SPSV), **you are required by law** to tell the licensing authority of any illness or physical disability you have that could affect your ability to safely drive a taxi or cab. Talk to your GP or consultant about this. They should tell you if you are safe to return to driving or if you need to report any change in your abilities to the licencing authority.

Physical and hidden changes that affect driving

If your brain injury has caused any of the physical or hidden changes listed on page 2 it is important to:

- Give yourself plenty of time to adjust.
- Visit your GP.
- Check with your GP or pharmacist that none of your medications will interfere with your driving.

Hearing loss

Many people can drive safely with hearing loss by using their mirrors more and being more observant of what is going on around them.

Difficulty communicating (Aphasia)

It is possible for people with receptive aphasia to continue to drive. Receptive aphasia is where someone has difficulty understanding written or spoken language. It is advisable to bring someone with you initially to make sure you are comfortable finding your way. Give yourself extra time. Many people who can no longer read road signs or maps find a Sat Nav (Satellite Navigation System) or the map function on their phones, invaluable.

Changes in eyesight and visual perception

You may still be able to drive a motorcycle, car or tractor, if you have adequate vision and meet the necessary eyesight standards. Ask your GP or consultant about this.

Perception is the mental process of recognising and interpreting objects, through one or more of the senses. The most important sense for driving is vision.

Depth perception: This is the ability to recognise and interpret the distance from yourself to an object or the distance between two objects. Depth perception is very important in being able to drive safely. If you can only see with one eye, it is possible to perceive depth but it is more difficult than using both eyes.

Physical disability and car adaptations

If your brain injury has affected you physically, it is a good idea to get an in-car assessment done by an Occupational Therapist or Driving Assessor. They will be able to see if you need any adaptations made to your car. If you get your car adapted, you must inform your insurance provider. If you do not inform your insurance provider, your insurance may be invalid.

Before making any decision about ordering adaptive equipment or making changes to your car, arrange a demonstration and try out using the adaptation yourself. It is very important to practice using any adaptations yourself to make sure they work well for you. See page 22 for where to find details for licenced car adaptation companies.

Driving with epilepsy or after a seizure

The medical guidelines are very detailed with regard to driving with epilepsy or seizures. Your consultant, or GP, should tell you how they apply to you. You can get the **Medical Fitness to Drive Guidelines** online at www.rsa.ie.

Epilepsy: If you have been diagnosed with epilepsy, the current rule is that you need to be free of seizures for one year before returning to driving, in most cases.

Single seizure: If you had a single seizure at the time of your brain injury, shortly afterwards or during brain surgery, you may be able to return to driving in less than one year. This is providing there are no other risk factors. Ask your consultant about this.

If you would like information and support regarding driving, epilepsy and seizures, contact **Epilepsy Ireland** on **01 455 7500** or visit **www.epilepsy.ie**.

What is a driving assessment?

A driving assessment is where an assessor runs through a series of checks to measure your skills in relation to driving. The Driving Assessor is usually an Occupational Therapist or specialist driving instructor. The skills they measure are in thinking, planning and awareness. They also assess your visual skills, your movement and your reactions.

The Driving Assessor does an out-of-car assessment first, then an off-road assessment and next does an on-road assessment, where appropriate. They will give you feedback during the session.

The purpose of the driving assessment is:

- To tell you what your strengths and weaknesses are.
- To advise you whether, or not, it is safe for you to return to driving.
- To make recommendations to assist you to return to safe driving, where possible.
Common recommendations are:
 - To take some driving lessons.
 - To make adaptations to your car or
 - To use an automatic car.

It is important to remember that if the assessor recommends you do not drive, this can often be re-visited at some point in the future if your health or abilities improve.

You can do the assessment in your own vehicle, or in an automatic or adapted vehicle, provided by the assessor.

-  You can get more information and access specialist driving instructors, through the Irish Wheelchair Association, the Disabled Drivers Association and other providers (contact details are on page 22). You do not need to use a wheelchair or have a physical disability to use these services.

“I was asked to go for the driving assessment. Even though I resented it, I was more confident that I was given the ok to start driving again.”

Cathal from Dublin

Is my licence still valid?

Your current licence is still valid unless your doctor:

- Tells you not to drive or
- Tells you that you need to inform the National Drivers Licence Service (NDLS).

The current **Medical Fitness to Drive Guidelines** list the conditions and treatments that drivers must notify to the NDLS. Your doctor will advise you if this applies to you or not. If your GP says you can drive but that you must notify the National Drivers Licence Service (NDLS), you notify them by applying for a change in personal details on your driving licence.

However:

- You do not have to re-sit your driving test and
- You do not have to pay a fee for the new licence.

To make a change in personal details on your licence, you need to:

- Make an appointment to visit your local NDLS centre.
- Get a **Driving Licence Medical Report** form filled in by your GP. On the form your GP can certify you to drive for one year, for three years or for ten years.
- Fill in a **driving licence application form**.
- Bring proof of your PPSN (Personal Public Service Number) and your address if it has changed.
- Bring your current driving licence.

Temporary Learner Permit

If your GP believes you are not safe to drive on your own yet and that you should get a driving assessment done, they can apply to the Medical Fitness section in the Road Safety Authority (RSA) for a temporary learner permit for you.

-  See also **Renewing your licence** on page 11. If you have any questions, speak to your GP or contact the National Drivers Licence Service on t: 0761 087 880 or visit www.ndls.ie.

Renewing your licence

If your driving licence has expired since your brain injury, fill out the licence renewal form and make an appointment at your nearest NDLS centre. You may be able to renew online if you have a Public Service Card and a MyGovID verified account - see www.ndls.ie for further information. If you have one of the conditions specified on the driving licence renewal form, your GP will need to fill in a **Medical Report** form.

Some of the conditions that require a medical report form are:

- Stroke, epilepsy or brain surgery.
- Some changes in hearing or sight.
- Restricted movement in your arms and legs.
- If your car has already been adapted to accommodate a physical disability.

If you have not been driving since your brain injury, your GP may ask you to have a driving assessment done. This assessment is to make sure you are still safe to drive or to see if you should have some driving lessons or get adaptations done to your car, (see page 8 for more information).

Contact the National Driver Licencing Service for driving licence forms and information – **t: 0761 087 880** or visit **www.ndls.ie**.

Do I need to tell my insurance company?

Before you start driving again, you need to let your motor insurance company know about your medical condition. Otherwise, it could make your insurance invalid and affect any claims you make in the future.

If your doctor says you are fit to return to driving, your insurance company cannot charge you more for your cover. They also cannot refuse to provide you with cover.

If you have been refused a quotation for motor insurance, you can request the reasons in writing from your insurance provider.

If you are not satisfied, you are entitled to go to the Declined Cases Committee of **Insurance Ireland**. Insurance Ireland is the representative body for most insurance companies in Ireland — **t: 01 676 1914**.

If you get your **car adapted**, you must inform your insurance provider. If you do not inform your insurance provider, you may not be covered.

You can get clear information and advice on car insurance from the **Competition and Consumer Protection Commission**. **Helpline t: 01 402 5555** or visit **www.consumerhelp.ie**.

Tax relief and parking

Disabled Drivers and Disabled Passengers Scheme

If you have a severe physical disability, you may be eligible to apply for tax relief for adapting a car, buying an adapted car and other expenses, under the Disabled Drivers and Disabled Passengers Scheme.

- The scheme is for people who wish to buy a vehicle or have one adapted. You can apply if you are the driver of the car being adapted, a family member or the passenger.
- However, to qualify for this scheme, you must have a severe or permanent physical disability and hold what is called a Primary Medical Certificate. This certificate is issued by the HSE.
- Any adaptations must be done by a company which is licenced by the National Standards Authority of Ireland (NSAI). See page 22 for details.

Call the **HSE Infoline** for information on applying for a Primary Medical Certificate **t: 1850 24 1850**.

You can get the rules of the Disabled Drivers and Disabled Passengers Scheme, and how to apply, from: **Citizen's Information** on **t: 076 107 4000** or **The Revenue Commissioners** on **t: 047 621 00**.

Disabled Parking Badge

A blue Disabled Parking Badge allows permit holders to use official disabled parking spaces.

- You can get one as a driver or as a passenger.
- The parking badge is issued to the person with the disability so they can use it for any vehicle in which they are travelling.
- To be eligible, you usually need to have a permanent condition or disability that severely restricts your ability to walk.
- If you are registered blind or have a Primary Medical Certificate, you will be automatically entitled to a Disabled Parking Badge.

You can get further information on the rules and how to apply for a Disabled Parking Badge from the **Irish Wheelchair Association (IWA)** or the **Disabled Drivers Association of Ireland (DDAI)**. These two organisations process all applications for the parking badges on behalf of the Department of Transport, Tourism and Sport (contact details are on page 22).

Many people find that a simple way to make driving easier is to change to an automatic car. If you would like to consider this, get advice and make sure you take a few test drives to check if an automatic car suits you.

If I cannot continue driving — what then?

Not everyone can go back to driving after their brain injury. This can be very challenging and hard to accept. Everyone reacts to this news in different ways. However, there are a few points to bear in mind:

- Your abilities may improve over time. If this is the case, it may be helpful to get another driving assessment done. Ask your doctor or Driving Assessor about this.
- If you cannot drive, consider what alternatives could work for you: lifts from family or friends, public transport, taxis or local accessible transport companies. Accessible transport services are listed here: **www.transportforireland.ie** or phone **t: 01 879 8300**.
- Consider applying for any entitlements that can help you maintain your independence. Some options may be: the Disabled Drivers and Disabled Passengers Scheme, the Disabled Parking Badge or the Free Travel Pass. **Citizens Information** can advise you on your options— **t: 076 107 4000** or **www.citizensinformation.ie**.
- Link in with support services and meet up with other people with brain injuries. Contact **Headway** for names of organisations in your area – **t: 1800 400 478** or visit **www.headway.ie**.

Answers to frequently asked questions

My doctor has told me I am medically safe to drive but I don't feel confident enough.

- Travel as a passenger as often as you can. Try to think as if you were driving the car. This will give you practice in anticipating danger, reading road signs and finding your way.
- Some people find it a very helpful to do some lessons with an experienced driving instructor or your driving assessor. Ask around to find someone who is patient and understands that you might be a bit nervous.
- If you have any after-effects from your brain injury that affect your driving, tell your instructor.
- See page 22 for where to find driving instructors and driving assessors.

Is it safe to have one drink and still drive?

- It is not safe to drink any alcohol at all if you are driving. Your brain is more sensitive to alcohol because of your brain injury.

I'm ready to get driving again but I'm not sure what is the best way to start.

- First, check with your doctor that they are happy for you to drive. Then, just sit in the car and go through the controls.
- Perhaps try your first bit of driving somewhere like a quiet car park.
- The first time you're going to drive out on the road, bring someone supportive with you. They can act as an extra pair of eyes and ears for you in case you don't notice something.
- Take your first drive on the roads on a short route you know well, at a quiet time of day. If you live in a busy area, get someone to drive you to a quiet place before you start.

I have a full driver's licence. I recently had my car adapted and will be returning to drive. Do I have to re-take my driving test?

- No. Provided you hold a full licence for the vehicle you are driving, if you have it adapted and return to or continue to drive, you are not required to re-take a driving test. However, you will need to apply for a change of personal details on your licence. See page 10 for more on this.

I'm sure I am fine to drive but my doctor and my family say I'm not. What can I do?

- Being told you are not ok to drive can be very hard to accept. It's normal to feel upset and angry — especially if you cannot see any reason for it. This is very understandable.
- Talk to someone you trust about how you are feeling.
- If you're not clear why the doctor is saying you shouldn't drive now, ask them to write down the specific reasons that, in their opinion, it is not safe for you to drive.
- Consider getting an off-road pre-driving assessment done by an Occupational Therapist. If they also feel that you should not continue driving, it may be easier to accept this when it comes from an independent professional who does not know you.
- It may be helpful to have your safety to drive re-assessed after a number of months, if your health or abilities improve.
- Some people who have had an injury to the front part of their brain lose the ability to realise things about themselves that other people can see clearly. This is known as a loss of insight. If you are told this has happened to you, try to accept that the doctor, or other professionals, may be right, even if you cannot recognise the reasons yourself. See page 15 for where to get more information or support.

I am ok driving on short journeys but I get very tired on longer ones. Any advice?

- Most people find they get tired more quickly after a brain injury. See the booklet '**Fatigue and Sleep**' in this **Brain Injury Series** for more information and tips.
- Plan regular breaks on longer journeys, even if you didn't have to before.
- It is much more tiring to drive through busy traffic. So, plan your journey so you will not be going through busy areas during rush hour.
- Share the driving with someone else.

Summary of key points

- Driving uses many skills that can be affected by a brain injury.
- Your GP or consultant has to decide when, or if, you can return to driving.
- A driving assessment can help you identify your level of ability to drive and indicate anything you need to work on.
- If you have had a seizure or suffer from epilepsy, the Medical Fitness to Drive Guidelines are very specific on driving. Ask your consultant for more information.
- You need to inform your insurance company about your brain injury but they cannot charge you more if your doctor has said you can drive.
- You may need to inform the National Driver Licencing Authority. Your doctor should advise you.
- You may be entitled to tax relief or a disabled parking permit.

To get more information and support see **Help and information** on pages 22 and 23.

Return to driving checklist

Before driving again, you must:

1	Visit your GP, or consultant, and comply with the Medical Fitness to Drive Guidelines.	<input type="checkbox"/>
2	Inform your insurance provider about your brain injury.	<input type="checkbox"/>
3	Inform your insurance provider if you are having your car adapted.	<input type="checkbox"/>
4	Apply for a change in personal details on your driving licence if instructed to by your GP.	<input type="checkbox"/>

Other things to do:

1	Get a driving assessment done if needed.	<input type="checkbox"/>
2	Take a couple of refresher driving lessons.	<input type="checkbox"/>
3	Bring someone with you the first time you drive.	<input type="checkbox"/>
4	Make sure you are physically comfortable and can control the steering wheel, pedals and indicators, for example.	<input type="checkbox"/>
5	If you do not feel safe driving, get additional advice or more lessons.	<input type="checkbox"/>

About Headway

HEADWAY
Brain Injury Services & Support

Founded in 1985, Headway is a charity that offers community-based brain injury rehabilitation services in Dublin, Cork, Kerry, Limerick and the South East. We also have a country-wide information and support service:

t: 1800 400 478 and web: **www.headway.ie**

Headway is accredited by CARF International for Adult Home, Community and Vocational Brain Injury Services. **www.carf.org**

Acknowledgements

This Brain Injury Series of booklets was written and developed by Headway's Information and Support Team. Its completion would not have been possible without the help of a large number of people connected to brain injury. Thank you to all those who assisted us to develop these booklets. In particular, our sincere thanks to the staff and clients of Headway who generously contributed their expertise, knowledge and experiences.

Our thanks also to Headway UK for kindly allowing us to use their publications as one of the main sources for this Brain Injury Series.

To support Headway Ireland's work, please phone **1800 400 478** or visit **www.headway.ie**.
